"A favorite German word of Einstein's was Schlimmbesserung (sh-lim-BESS-air-oong). It means 'changes attempted or improvements that make things worse' Basically, for every gain, there's something lost. Some creativity, spontaneity, wonder and innocence is always lost as maturity and experience develops. More materially when one adds a GPS and a Spot-Tracker to a motor bike, something important about the riding and exploring experience is being lost... Still, I've always taken the GPS. And sometimes laughed (and swore) at myself when ending up on the wrong road of a complicated interchange because I was paying too much attention to the little 'map' scrolling past on the screen...and not enough at the passing roads and signage."

Many personal players do not provide quite enough volume to blast over wind noise or past earplugs. There's just too much ambient roar. The Boostaroo can help. Plug it into the phones output jack of your radio/scanner/whatever, then connect your helmet or earplug speakers. Voila, it amps-up the sound by about a third. Input device volume adjustments remain functional, but everything tops at a greater volume. Clearly and cleanly, too. About a 12dB volume gain in a typical ear bud speaker. Two AA batteries (not included) last about 20 hours. There are two jacks so a passenger can also listen along without complicated wiring. 40mw per channel.

This device is made in Finland where orienteering is the national sport. Not only does the Vector tell time in 12 or 24 hour formats, it has a stopwatch, a countdown timer and a calendar programmed to 2089. It also tells you where you are with a highly accurate digital compass that shows bearings in degrees or half-cardinal points. There is also a declination adjustment and a level window to get the unit within +/- 2-3 degree accuracy. The compass has a bearing tracking function which displays the locked bearing, the actual bearing,

and the difference between them. As an altimeter, the Vector will tell the altitude to 29,500 feet in 10 foot divisions and relay the rate of ascent or descent in feet or meters per minute. An automatic 24-hour memory stores altitude and ascent/descent rates. The Vector also acts as a barometer, displaying the full range of atmospheric pressure. A differential measurement allows zeroing of the barometer following overnight changes, and a 4-day log provides data on the pressure changes in hour intervals for the last six hours elapsed, then in six hour intervals. All this is packaged in a waterproof housing that is electroluminescently backlit. An amazing amount of useful data acquisition in a compact package. Black or Yellow. 1.9 oz. 1.25" face dia.

MOTO COMPASS

The first motorcycle-specific magnetic compass that can be calibrated while mounted on your bike (using compensation screws on the side of the unit). This makes it much more accurate on every heading. Proximity to metal gives most smaller compasses a terrible fit, but not this one. And the other compensation-adjustable compasses are much larger. With this you can become lost in much more interesting places, no matter what direction you may be riding. Mounting bracket included. 1.65"x1.5".

#3295 \$65.00

AEROSTICH HANDLEBAR CLIPS

An accurate, durable, easy-to-read liquid-filled compass that simply clips onto any 7/8" or 1" handlebar. Luminous 1" floating dial on jeweled pivot provides smooth rotation. Easy to remove and replace, the compass clip needs to be removed for accurate readings. Weighs only a few grams. Also as accurate and durable as the compass, is an easy to read, liquid filled -20°F to +160°F thermometer. It too clips onto any 7/8" or 1" handlebar. One inch diameter dial. The clock clip is specially made for us and features a sweep-second quartz movement that is not really intended for outdoor use but the prototype survived two seasons on Ed's 500 single so we think it's OK. YMMV, however.
