1. Attach **Warm Wrap Grips** tightly around the handle bar grips, so that they do not slip. The velcro will overlap and hold the grips into place.
2. Terminals or tabs exiting from the grips can be bent to clear the controls, if necessary.
3. The fuse cord should be connected to the battery or electrical system w/red connected to positive terminal.
4. The connecting plugs are moisture resistant.
5. The grips draw 1.6 amps at 12.6 volts.
6. The grips radiate 21 watts at 12.6 volts.
