## COURIER/DISPATCH/PARCEL BAG STABILIZER STRAP

This accessory is used for greater security when the rider may be making abrupt maneuvers or when the torso is canted forward as with low bars. To install, unclasp the main bag strap from its buckle and thread the small looped section onto the strap. The best location seems to be approximately over the sternum. Running the strap around the torso, connect the plain end of the stabilizer strap to the bar-lock buckle on the bottom of the bag closest to the small of your back. This is done by threading through both slots as shown. The strap can be easily disconnected by using the quick-release buckle. The bag is also adjusted to its desired tightness using this buckle.
