

Thank you for purchasing Ultralight Rain Pants and/or Emergency Boot Covers. They are compact, easy to carry and ready to wear when you need protection from wet conditions. They are fully seam sealed and use water resistant coil zippers and a lightweight, waterproof, coated ripstop nylon fabric.

**Use Guide:*****Emergency Boot Covers***

The position of the reflective indicates the right or left boot cover. The reflective should be on the outside (away from your motorcycle). Carry them under your bike's seat, or in a courier bag or tank bag. Leave the entry zipper unzipped and stuff the entire boot cover into the toe section to store. Getting everything packed inside the toe first time will take practice, but after a few times it becomes easy. After packing, close the Velcro on the top and bottom of the toe section and you will have a small crescent shaped package that is easy to pack and carry. Boot Covers are designed for use while riding. Walking off-bike while wearing them may reduce their waterproofness.

Pack and store for extended periods only when the boot covers are dry

***Ultralight Rain Pants***

Waterproof leg zippers allow these rain pants to be put on over riding boots. They can be compactly stored inside the zipper pocket contained in the pants. If you wedge the bag into a cavity under the seat or behind a fairing panel, make sure that: 1) It cannot interfere with your motorcycle's controls, cables, or wires, and 2) That it is not in contact with any superheated exhaust or engine components and 3) That it does not block an air passage for cooling or intake, and 4) That it cannot vibrate or slide into any moving suspension, drive chain or wheel components. For immediate use when needed, unzip the front and side zippers before storing. If the storage pocket does not 'square' after stuffing, and that's what you want, then restuff. The one-sided waist drawstring can be shortened by cutting if you want the waist to always be partly gathered. Pack into zipper pocket only when dry if they are to be stored for extended periods.

Washing and care: Hand or machine wash warm or cold using a mild detergent. Hang dry or machine dry on low or medium.

**Caution:**

Both the rain pants and emergency boot covers are made of lightweight nylon. All nylon items can melt on contact with exhausts, mufflers, and other superheated components, and the lighter the nylon the easier and faster this might occur.
